Theme: Contribution of space technology for solving current/future global issues

Concept:

All successful space endeavors start with innovative ideas, and it is important to incorporate new and creative ideas for the evolvement of the space sector and also towards a new space era. Taking in the suggestion from APRSAF-25 participants, this year’s APRSAF will have a dialogue session between HOA and young generations, to provide an opportunity to hear the innovative ideas from young generations who will lead the future space sector.

This session will invite HOA and young generations (high school & university students and young professionals) to exchange their views on how space technology could be utilized for the betterment of society and for solving current and future global issues such as SDGs. Passing down our experiences and knowledge to our young generations and incorporating the innovative ideas from young minds are essential for the enhancement of space application in our society and the further advancement of space technology.
